

RDB22C Boxer Double Combo

FOR WATER AND SOLVENT BASED PAINTS

The Boxer double combo is designed to clean solvent and aqua sprayguns. The Boxer incorporates the Drester Autobox, which provides a compact automatic cleaning area supplied by pump fed recirculating solvent and a manual clean rinse spray. The compact size of the Autobox means that manual cleaning of waterborne sprayguns can also take place in the manual workstation at the same time as solvent guns are being cleaned. The unit is equipped with a flow through brush to clean the externals of the spray gun and a paint channel flush gun for the internal surfaces. The unit is also supplied with a blowgun to dry off the sprayguns after cleaning. The waterside of the machine is equipped with our well-tested water recovery system that allows the water or Aquasolve to be recycled using a flocculating powder and filters so that it can be reused and disposed of at lower cost. As with most of our spraygun cleaners they are foot pedal operated, creating a hands free operation while handling expensive sprayguns.

FEATURES:

- Automatic washing station, using re-circulating solvent and manual clean rinse
- Sink for manual cleaning of waterborne paints is equipped with and a flow-through brush and clean rinse nozzle
- Using recycled water and a paint channel rinse gun using clean water
- The Double C comes equipped with a pneumatic extractor
- Ex II 2 G EEx c IIA T6
- The Double C can be ordered with stainless cabinet (DI22C)
- Air purge line
- Sagola, Devilbis and SATA approved
- New Aquasolve concentrate available for use with all Redashe aqua machines (R230120)
- Sagola, Devilbis, Iwata and SATA approved
