

GIJG-3TW

RedCure Infrared Curing Lamp

The Redashe GIJG-3TW Infrared Curing Lamp is the perfect addition for any paintshop looking to provide a high quality finish while saving money at the curing stage. This light is equipped with a gas assisted pivoting arm and easy to use handle to move the lamp into position over a roof or bonnet.

This light comes with a easy to use digital display that allows for a reduced power flash off to ensure all solvent has been released before fully curing the paint on full power. The digital display allows control of both power and time, giving flexibility for paints and putties. Supported by three powerful 1000 watt lamps, primer and top coat can be cured in just minutes. The main lamp body is made of a lightweight aluminium alloy combined with a reflective lamp profile allowing for maximum heat conversion.

TECHNICAL DATA

Voltage:	220-240v 50/60hz
Temperature Panel:	Digital
Power:	1000W x 3
Operating Current:	15amp
Timer Range:	0-99 Minutes
Power Range:	30-99%
Baking Area:	1100mm x 1000mm
Dimensions:	1570x130x620mm
Weight:	46kg
Service Hours:	5000hr
Operational Temperature:	30-80 °c
